SHIVARGHA BANDOPADHYAY

AI Product Manager · GenAI & Computer Vision Specialist · AI Product Builder · MBA (IIM Udaipur)

shivarghabandopadhyay@gmail.com | +91-9665089047 | github.com/shivargha98

PROFILE SUMMARY

Product leader bridging AI/ML engineering and business strategy with 53 months of full-time experience across BFSI, defense, and surveillance sectors. Proven track record of shipping AI-powered products, from OCR pipelines to GenAI agents, and of designing the AI-native SDLC and eval systems that let teams ship them faster. Now pursuing an MBA in Digital Enterprise Management (IIM Udaipur) to lead product vision at the intersection of emerging AI and enterprise transformation.

CORE PRODUCT & AI COMPETENCIES

- Product Strategy & Roadmapping
- AI/ML Product Development
- Stakeholder Management
- Intelligent Document Processing (IDP)
- GenAI, Agentic AI & Evals
- Cross-functional Team Leadership
- Workflow Automation & KPI Optimization
- OCR, Computer Vision, RAG
- Go-to-Market Experimentation

PRODUCT & ENGINEERING EXPERIENCE

Transformation Excellence Consultant · **Accenture** · *Mumbai* — *Apr 2026 – Present*

Enterprise Agentic AI · Multi-Agent Product Build

› **Drove the 0→1 build of a multi-agent product** for a North American retail giant, owning product definition and orchestration strategy across autonomous agents to automate complex workflows

› **Architected agent orchestration** with a modular skill structure, structured agent handoffs (MCP and A2A), and cross-memory across chat and voice

› **Part of the 0→1 build of the ontology generation and authoring data product**, from MVP to release, refining features through multiple rounds of user feedback

› **Re-architected ontology generation with an agentic harness** (plan → generate → validate → self-correct), **improving accuracy by 40%** and reducing SME review effort by 30%

› **Shaped product UI/UX and the roadmap for both products** through end-user feedback loops, translating client requirements into agentic capabilities and steering from pilot toward production readiness

› **Designed and implemented an AI-native SDLC** for the delivery team (intent capture → clarifying questions → codebase exploration → coding → test plans), **cutting feature cycle time by 30%** across 5 engineers

› **Extended the AI SDLC for product managers** to test divergent ideas against the live codebase, **cutting idea-to-feasibility checks from 2 days to 3 hours**

› **Implemented evals** across the AI SDLC and ontology generation (golden datasets, LLM-as-a-judge, regression gates) to measure quality and gate releases

Computer Vision Engineer · **Niyogin AI** · *Mumbai* — *Jun 2024 – Apr 2025*

Generative AI & Product Integration

› **Managed a structured product transition** as Niyogin AI acquired Orbo AI's fintech document intelligence segment — leading cross-functional knowledge transfer, re-onboarding stakeholders on existing pipelines, and ensuring zero disruption to live KYC workflows during the handover

› **Led product definition and fine-tuning** of a Vision-Language Model on 1L+ KYC documents, enabling the AI to generalize to unseen document formats expanding TAM

› **Drove 75% initial extraction accuracy** by productizing the trained VLM for KYC and credit assessment workflows, reducing turnaround time for loan processing

› **Validated RAG-based GTM hypothesis** with 90% accuracy on non-financial doc extraction, informing product roadmap decisions for a new document intelligence vertical

› **Orchestrated 5+ AI automation workflow integrations** across cross-functional teams, delivering a 30% efficiency gain in cheque extraction and KYC validation processes

Computer Vision Engineer · **Orbo AI** · *Mumbai* — *Jun 2022 – Jun 2024*

Intelligent Document Processing — B2B SaaS Product

› **Shipped OCR pipelines with 95% accuracy**, directly improving the flagship IDP product's reliability KPIs and customer satisfaction scores

› **Built and owned document classification models (95%+ accuracy)** that scaled across diverse formats, enabling product expansion to new enterprise client verticals

› **Led automation of NACH data entry** at 90%+ accuracy across 50K+ documents, replacing manual ops and reducing per-document processing cost significantly

› **Engineered cheque & demand draft extraction pipeline** (95%+ accuracy) that streamlined downstream KYC compliance tasks for fintech clients

› **Reduced OCR error rates by 30%** via image enhancement models, improving core product accuracy KPIs and enabling SLA compliance

Engineer – Image Processing · **Azista Industries (P) Ltd** · *Hyderabad* *Sep 2021 – Jun 2022*

Defense Technology & GIS Automation

› **Scaled object detection pipeline to 5TB+ satellite imagery** — enabling defense automation at a scope previously requiring extensive manual analyst hours
› **Improved target identification accuracy by 18%** via detection & tracking models, boosting operational readiness KPIs for Defense Forces
› **Deployed product pilots with 95% precision**, enabling real-time situational awareness and securing stakeholder buy-in for continued AI adoption
› **Reduced manual monitoring effort by 30%** through automated movement detection, freeing operator capacity for higher-value tasks

Deep Learning Engineer · **Pivotchain Solutions** · *Pune* *Nov 2020 – Sep 2021*

Video Analytics & Edge AI

› **Delivered end-to-end real-time AI solutions with 95% accuracy** through cross-functional coordination across engineering, QA, and client teams
› **Reduced infrastructure cost** by achieving 100–150 ms/frame inference on CPU-only edge devices — making the product viable for cost-sensitive enterprise deployments
› **Improved detection precision by 25%** via model upgrades, enabling expansion of surveillance workflow automation and boosting threat detection accuracy by 20%

FEATURED PRODUCT PROJECTS

Voice Agent (Health Insurance)
2025
› Built a multilingual voice agent for health insurance customer queries — automating identity verification and policy validation
› Reduced customer wait time through AI-driven, frictionless self-service experience

Text-to-SQL Agent
2025
› Designed a LangGraph-powered Text2SQL agent enabling non-technical users to extract data insights via natural language
› Integrated Guardrails for secure query generation and Chainlit for a polished Chat-UI — driving user adoption

MCP Orchestrator
2025
› Engineered an agentic workflow using Docker and MCP to autonomously trigger and orchestrate data pipelines
› Implemented Agent-to-Orchestrator handshake with Apache Airflow API and NoSQL database

Cricket Analytics App
2025
› Built ball-by-ball analytics application with interactive match insights and efficient data pipelines for large sports datasets
› Deployed live: ipl-viz-sb.streamlit.app

INTERNSHIPS

Applied AI Product Manager (Intern) · **Stealth AI Startup** · *Remote* *Jan 2026 – Apr 2026*

HRTech · 0→1 Product Build · AIOps & Agentic Hiring Automation

› **Owned end-to-end product roadmap** for a 0→1 HRTech AI platform, defining feature prioritization, user stories, and sprint goals in collaboration with engineering and design from day one
› **Architected the AIOps foundation** by setting up MLflow Prompt Registry and evaluation frameworks, establishing the infrastructure needed to systematically track, version, and improve LLM prompts across the product lifecycle
› **Defined and shipped eval pipelines** to measure agent response quality and reliability, enabling data-driven decisions on model selection and prompt tuning reducing iteration cycles on agent quality
› **Led product specification and delivery of a Resume Parser Agent**, translating recruiter pain points into structured agent behavior, enabling automated candidate profiling at scale
› **Built and shipped a JD (Job Description) Parser Agent** that extracts structured requirements from unstructured JDs, accelerating candidate-to-role matching and reducing manual screening effort for hiring teams
› **Owned and built the entire product frontend using Claude Code** — independently shipping UI features end-to-end without dedicated engineering support, compressing the product development cycle & enabling faster user feedback

TECHNICAL SKILLS

Languages	Python (Pandas, NumPy, Sklearn, TensorFlow, PyTorch) · Visualization: Seaborn, Plotly, Matplotlib
ML / DL	Linear & Logistic Regression, KNN, Boosting Models, SVM · CNN, LSTMs, Transformers, Object Detection
Generative AI	Agentic Patterns: ReACT, Reflection, Reflexion, LLM-as-a-Judge · RAG: Text, Multimodal, Agentic
Frameworks	LangChain, LangGraph, Google-ADK, Chainlit, Streamlit · Docker, Apache Airflow, MCP
AI Tools	Claude Code, OpenAI Codex, Lovable, Antigravity

EDUCATION

MBA – Digital Enterprise Management *Apr 2025 – Mar 2026*
Indian Institute of Management, Udaipur

B.E. – Electronics & Telecommunication *2016 – 2020*
Sinhgad College of Engineering

ACHIEVEMENTS & LEADERSHIP

› **National Finalist – Trilytics Analytics Competition (IIM Calcutta):** Top 10 out of 7,000+ teams for modeling large-scale farmer income data with stacked ensemble architecture
